Full-stack Software Engineer

With more than 7 years of experience in software development, I am intensely familiar with the modern technology stacks and have experience in all stages of product development.

WORK EXPERIENCE

Senior Software Developer — AstrumU, Ukraine
From October 2018 to February 2022

- Architectured and developed front-end applications using TypeScript.
- Created scalable and performed architecture for the client-side of the web application.
- Migrated application from REST API to GraphQL on both sides - client and server.
- Managed the front-end team of three developers. I was involved in daily calls, standups, and planning.
- Participated in planning sessions and creating a technical plan of actions required for the product.
- Refactored the very first version of the client from jQuery to React Collaborated with data science engineers to set up receiving the latest data from them.
- Created a shared component library and store that library using monorepo approach.

Front-end Developer — IT School, Ukraine
From July 2017 to September 2018

- Created from scratch a training program for six months, for learners.
- Taught the necessary technologies for developing the client interface to novice developers.
- Conducted regular exams on the material passed for learners.

Front-end Developer — 8kolo, Ukraine
From August 2016 to July 2017

- Worked on the development of the client-side web application using HTML and CSS modules and React.
- Participated in creating and planning product requirements.
- Presented the MVP version of the application in startup incubator
